

MAST CLIMBER MM50

SINGLE MAST

TWIN MAST

| GENERAL DATA | SINGLE MAST | TWIN MAST |
|--------------------------------------|---|-----------|
| Lifting speed | 6 m / min | |
| Maximum height | 200 m | |
| Max. distance between anchors | 12 m | |
| Freestanding maximum height | 9 m | |
| Maximum platform length | 13,4 m | 34,7 m |
| Max. distance between mast axis | - | 21,8 m |
| Platform width | 1,3 m | |
| Max. telescopic extensions width | 1 (opt.) / 1,75 m / 2,5 m | |
| Decks (without floor) | 0,83m = 55 kg / 1,5 m = 80 kg | |
| Mast section | Square 560 x 560mm x 1,5m = 82 kg | |
| Drive unit weight (per mast section) | 1100 kg | |
| Maximum wind speed | Anchored = 55 km/h Freestanding / installation = 45 km/h | |
| Temperature range | -30 / +55 degrees Celsius | |
| Noise level in service | < 80 Db (A) IEC81 | |
| Main components hot dip galvanized | | |

| ELECTRICAL DATA | |
|---|--|
| Power supply (V) | 400V 50Hz, 220V 60Hz |
| Hand tools power supply (V) | 230V 50Hz, 110V 60Hz |
| Control voltage | 48 VAC |
| Motors power (per drive unit) | 6 m/min = 2 x 2,2 kw (50Hz) 8 m/min = 2 x 2,2 kw (60Hz) |
| Min. required power (per drive unit) | 6 m/min = 6 kw |
| Nominal current (per drive unit) | 6 m/min = 9 A |
| Starting current (per drive unit) | 6 m/min = 43 A |
| Min. three phase generator (per drive unit) | 6 m/min = 25 KVA |

| SINGLE MAST | | | |
|-------------|----------------------------|---------------------------|----------|
| L (m) | Total Length Configuration | Total Service Load Q (kg) | |
| | | ∇_{1m} | ∇ |
| 13,4 | | 750 | 900 |
| 11,8 | | 1300 | 1450 |
| 10,1 | | 1500 | 1650 |
| 7,1 | | 1900 | 1950 |
| 4,1 | | 2200 | 2250 |
| 2,8 | | 2400 | 2400 |

| TWIN MAST | | | |
|-----------|----------------------------|---------------------------|----------|
| L (m) | Total Length Configuration | Total Service Load Q (kg) | |
| | | ∇_{1m} | ∇ |
| 34,7 | | 1600 | 2050 |
| 30,7 | | 2080 | 2480 |
| 24,7 | | 2800 | 3120 |
| 20,2 | | 3340 | 3590 |
| 15,7 | | 3880 | 4070 |
| 9,7 | | 4600 | 4705 |
| 6,7 | | 4000 | 5023 |

| STANDARD MECHANICAL SAFETIES | STANDARD ELECTRICAL SAFETIES |
|--|---|
| 2 motors with gearbox and electromechanical brakes | Interlocking device on access door |
| 2 centrifugal brakes per drive unit | Top, bottom and emergency stops |
| Floating motor plate | Rack detector |
| Automatic self levelling in twin mast | Emergency stops |
| Emergency descent | Low voltage control |
| Top and bottom stops with buffers | Movement acoustic buzzer |
| Mast protector | Right / left drive unit selector |
| Anti slippery floor | Phases control relay |
| Motor protecting cover | Emergency stop pushbuttons at control panel and drive units |
| Metallic railing and telescopic railing on sides | Delayed starting, with acoustic signalling |

MAST CLIMBER 3D

Mast climbers are designed to work on the façade of the building, in a safe, and productive environment, replacing the old methods of scaffolding. Compared to scaffolding it allows to save time on the installation, operation, and save a lot on labour cost.

Mast climbers are much more productive, allowing to transport materials up to 5 tons

on the decks, typical applications are: glass panels installation, cladding, stones, bricks etc.

Mast climbers are versatile, always adapting to the shape of the building: curved, inclined, cantilevers etc. improving your logistic cost, your labour cost, your productivity and your safety on site.
